AUTO FILE RENAMING AND BATCH PROCESSING SOFTWARE

Advance File Renamer

Advanced Renamer is a program for renaming multiple files and folders at once. By configuring renaming methods the names can be manipulated in various ways.

..2..

It is easy to set up an advanced batch job using multiple methods on a large amount of files. The 14 different methods enables you to change the names, attributes, and timestamps of files in one go. The files can also be copied or moved to new locations based on information in the files.

With Advanced Renamer you can construct new file names by adding, removing, replacing, changing case, or giving the file a brand new name based on known information about the file.

Before performing the operations on the files you can verify that the output will be correct and if you perform the rename and regret it, you can undo the complete batch.

Image files

This mass file renamer is a great utility for organising digital pictures for both professionals and beginners. The thumbnail mode lets you display thumbnails directly in the file list giving you maximum control of the renaming process. With this program you can rename all your photos in a snap.

Simulate function

Fast File Renamer has a 'simulate' function which allows you to preview the effects of any changes without actually applying them to the real files. Fast file renamer also supports the use of the '*' wildcard character (inside the pattern which is to be deleted or replaced).

Portability

Fast File Renamer comes with its own installer/uninstaller, but you can also run it without installation or run it directly from a USB stick (just copy the program files to the external drive).

..3..

Drag-drop

To add files to the list (of files to be renamed), you can use the 'Add files button', but you can also drag-drop multiple files, directories (or a combination of both) onto the list. When you drop a directory onto the list, all files inside that directory will be added to the list as well as the files in all sub directories recursively.

License and platforms

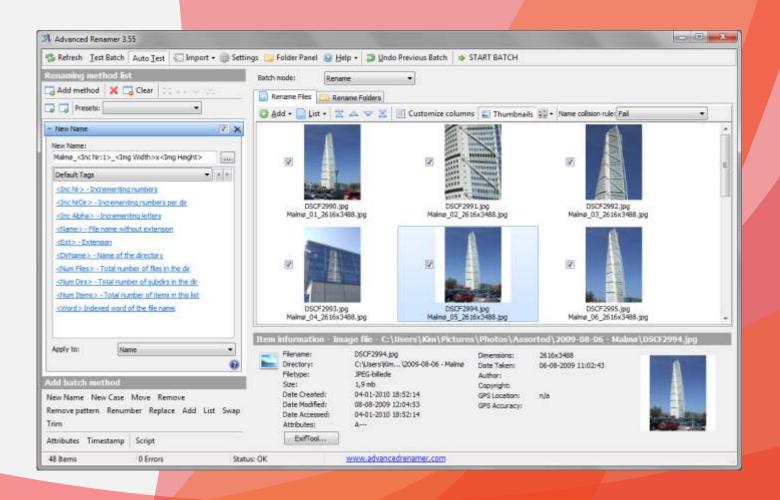

Freeware for Windows XP, 7, Vista, 200x, NT, 98, ME, Linux/wine and all current 64 bit editions of Windows. This program is freeware for corporate and personal use, so you can run this program in any commercial or non-commercial setting.

POD Scanning & Renaming

One of the applications that courier companies use is the software for renaming scanned images of POD (Proof of Delivery). Courier companies need to retain the POD for any claim araising from the consignee about non delivery of the consignment. The scanned files are picked from the scanner dump folder and taken into the batch processing folder. The software will read the data and pick up the relevant data fields from the POD and rename the file. In this case POD of mobile phone bill delivery when scanned will rename the file by capturing the bar code and numerical value of mobile number. Therefore the electronic file get re named by its consignment number that is bar coded and mobile number that is printed on POD. This software eliminates bottleneck in the process and saves on manpower cost.
